Vibecoding & AI Workshop

Interactive Training + Live Demonstration

Duration: 2 Hours | Beginner-friendly | Idea → Deployed App

OBJECTIVE

What this workshop is for

To introduce participants to AI-assisted development and equip them with the basic skills to turn an idea into a functional AI-powered application using vibecoding — even with minimal coding knowledge.

AGENDA

Training Schedule

No.	Session	Time
1	Workshop Introduction: Startups, AI & Vibecoding	10 min
2	AI Models & Development Tools	10 min
3	Prompt Engineering	10 min
4	Live Demo: Building an AI-Powered App	80 min
5	Closing Remarks & Next Steps	10 min

SESSION 1 · 10 MIN

Startups, AI & Vibecoding

- How startup ideas become solutions
- Introduction to AI and real applications
- Understanding vibecoding
- Building apps with minimal coding knowledge

SESSION 2 · 10 MIN

AI Models & Development Tools

- **Gemini Flash-Lite** — primary AI model
- **VS Code** — development environment
- **GitHub** — code management
- **Kaggle** — datasets

SESSION 3 · 10 MIN

Prompt Engineering

- Why prompts matter in AI-assisted development
- Writing prompts to generate, modify, and debug code
- Models covered: ChatGPT, DeepSeek, Claude

SESSION 4 · 80 MIN

Live Demonstration

1. API Key Generation (Google AI Studio)
2. Idea → effective development prompt
3. Code generation with an LLM
4. Setup in VS Code
5. Dataset from Kaggle
6. Train / integrate ML model
7. Integrate Gemini
8. Test & deploy on Vercel

KEY CONCEPT

Gemini + Dataset, correctly

Gemini Flash-Lite is a generative AI model accessed through an API.

> It is not directly trained on a Kaggle dataset through its API. A separate ML model is trained on the dataset, then integrated alongside Gemini.

SESSION 5 · 10 MIN

Closing & Next Steps

- Recap of tools and concepts
- How to continue independently after the seminar
- Practice vibecoding, datasets, and AI apps
- PDF resource shared for future reference

BUILD2LAUNCH

Thank You

Let’s turn ideas into working AI-powered applications.
